

Animal Laboratory Information Management

STREAMLINED ENTRY, ACCESS AND MANAGEMENT OF YOUR LABORATORY TEST DATA.

USALims (U.S. Animal Laboratory Information Management System) is the complete laboratory information management system. A USALims solution with seamless enterprise integration, user friendly interfaces, detailed reporting, and thorough search options is geared to optimize early identification for containment, and eradication of animal diseases.

FUNCTIONALITY

Simple, intuitive navigation allows users to transfer, manage, and process data with ease. Comprehensive search capabilities and detailed reporting functions contribute to efficient and productive data management. Fully configurable to your specifications, the web-based USALims interfaces with your instrumentation. Not only can USALims help you and your team manage high volumes of testing data but it will help you control your accounts and manage billing, all the while maintaining a complete audit history, and ensuring regulatory compliance. USALims includes a web portal for customers to order testing and view reports as well as integrated NAHLN messaging.

TECHNOLOGY

Safe and secure, USALims can be accessed enterprise wide. Smart Client technology utilizing VB.NET allows for data access anytime, anywhere. Data is stored in a SQL Server 2005 database.

VALUE

USALims is a robust data management tool, integrating all facets of your animal health laboratory into a central repository. USALims features automated client report generation, distribution, auditing, advanced search options, canned comments and shortcuts, and client account and billing management. Post production application maintenance and user support is available. USALims can increase the effectiveness of your animal health management efforts while simultaneously reducing costs and wasted time.
